Analyte Certification - Mass Balance Purity Factor

Each analyte is thoroughly identified and characterized using an orthogonal approach. A mass balance purity factor is assigned incorporating chromatographic purity and residual impurities. The mass balance purity factor is utilized to calculate the weighing adjustment necessary to ensure accuracy of the solution standard concentration.

Material Characterization Summary

Analytical Test	Stanard	Results
Chromatographic Purity by HPLC/UV Analysis	≥97%	98.32%
Total THC (Δ^9-THC and THCA-A) on a Dry Weight Basis	ND	ND
Identity by LC/MS Analysis	Consistent with Structure	Consistent with Structure
Identity by ^{1}H-NMR Analysis	Consistent with Structure	Consistent with Structure
Residual Water Analysis by Karl Fischer Coulometry	1%	ND
Mass Balance Purity Factor		98.32%

- The chromatographic purity is calculated as the average of two independently performed analyses utilizing two different methods. Acceptance criteria requires the purity values to be within 0.5% of each other.
- The chromatographic purity value is used to calculate the Mass Balance Purity Factor.
- Mass Balance Purity Factor = [(100 - wt% residual solvent - wt% residual water - wt% residual inorganics)xChromatographic Purity/100].
- Mass Balance Purity Factor does not include adjustment for chiral and/or isotopic purity.
